SUMMARY

DevOps / MLOps engineer with 4.5+ years building production platforms on AWS, Azure, GCP, and Kubernetes. Recent work includes production AI/LLM infrastructure (LiteLLM, Phoenix), CI/CD automation, Terraform IaC, and observability at scale across AWS, Azure, and GCP. Experienced in moving AI-enabled applications from development to reliable production with security controls, monitoring, and incident response.

KEY MLOPS & PLATFORM PROJECTS

Production LLM Inference & Monitoring Platform | Revent Labs | 2025-Present

- Built AI platform infra with LiteLLM (inference gateway) and Phoenix (LLM observability, tracing, usage tracking) across 5+ apps.
- Containerized services (Docker) on AWS ECS; automated releases via GitLab CI/CD.
- Partnered with engineering on dev-to-production AI rollout, runbooks, and production support.
- Integrated CloudWatch + Grafana for health monitoring and incident detection.

Impact: Organization-wide production AI adoption with monitored, repeatable releases.

Secure CI/CD Pipeline for AI Application Deployment | Revent Labs | 2025-Present

- GitLab CI/CD workflows for AI-enabled services with staged build -> scan -> deploy promotion.
- Deployed SonarQube and integrated quality gates in CI/CD; DevSecOps scans (Semgrep, Trivy, container scans) blocking Critical/High issues pre-production.
- DefectDojo for centralized vulnerability tracking with Azure SSO integration.
- Supported SOC 2 / ISO 27001 readiness through secure release enforcement.

Impact: ~40% reduction in high-risk production vulnerabilities.

Self-Service DevOps Automation (Python Slack Bot) | Flutterwave | 2023-2025

- Python Slack bot to auto-create GitLab repos with standards and default .gitlab-ci.yml templates.
- Reduced DevOps dependency for new service onboarding and improved CI/CD consistency across teams.

Impact: Faster onboarding and standardized deployments across engineering teams.

EXPERIENCE

Team Lead - DevOps / MLOps

Revent Labs | June 2025 - Present | Indore, MP

- Lead DevOps team; own AI platform ops, multi-cloud infra (AWS/Azure), SonarQube CI quality gates, and production reliability.
- Terraform / AWS CDK platforms; zero-downtime EC2 -> ECS migration (~30% scalability gain).
- Set up Netmaker VPN for secure access to internal DB and monitoring dashboards.
- Own P0/P1 incident response, RCA, and post-incident hardening.

DevOps Engineer II

Flutterwave | Nov 2023 - Jun 2025 | Gwalior, MP

- Operated Amazon EKS for Send Money platform (99.9%+ uptime); deployments, scaling, troubleshooting.
- Terraform automation (~60% less manual work) and GitLab CI/CD (~40% faster releases).
- Prometheus/Grafana/Loki observability; supported AWS -> Azure migration.

DevOps Engineer

Legit Bytes | Jan 2022 - Oct 2023 | Remote

- Jenkins CI/CD and Docker/Kubernetes pipelines (~40% faster releases).
- Ansible + Python/Bash automation (~50% fewer config incidents); AWS infra management.

EDUCATION

B.E. - Electronics and Communications Engineering

Teerthanker Mahaveer University | 2018 - 2022

SKILLS

- MLOps & AI: MLflow, vLLM, Qdrant, Unsloth, LangChain, RAG, LoRA/PEFT, HuggingFace, Triton, LiteLLM, Phoenix
- Cloud: AWS (EKS, ECS, EC2, Lambda, VPC, IAM, S3, RDS, CloudWatch), Azure (AKS, APIM, VNet, WAF), GCP (GKE, VPC,

IAM, Cloud Storage, Cloud Monitoring)

- Containers: Docker, Kubernetes, Helm, ECS
- IaC / scripting: Terraform, Ansible, AWS CDK, Python, Bash, PowerShell
- CI/CD: GitLab CI/CD, Jenkins, GitHub, Argo CD, SonarQube quality gates
- Observability: Prometheus, Grafana, Loki, CloudWatch
- Web servers: Nginx, OpenResty
- Networking: DNS, TCP/IP, Firewalls, SSL/TLS
- Mail servers: AWS SES, Postfix
- Security: DevSecOps gates, SOC 2 / ISO 27001, DefectDojo, Netmaker VPN
